PROFESSIONAL SUMMARY

Software engineer with **First-Class Honours**, combining frontend, backend and cross-platform mobile development with **hands-on architecture and technical leadership**. Delivers accessible interfaces, APIs and data-intensive products using React, Next.js, TypeScript, Node.js, Fastify, Flutter and React Native. Experience includes **payment and authentication systems**, real-time workflows, geospatial visualisation, **LLM-powered features and AI agents**. Takes ownership from requirements and database design through automated testing, cloud deployment and observability, improving performance, release speed and reliability. Adapts quickly to new domains and tools, leads code reviews, mentors engineers and contributes merged open-source fixes.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, React Server Components, Server Actions, TanStack Query/Table, Zustand, Redux, Storybook, Tailwind CSS, accessibility, responsive UI.
Mobile: Flutter, Dart, React Native, Riverpod, GetX, BLoC/Cubit, go_router, deep links, notifications, offline caching, app releases.
Backend and data: Node.js, Fastify, Express, REST APIs, PostgreSQL, PostGIS, Prisma, MongoDB, Redis, BullMQ, Socket.IO, Python/Django, authentication, payments and webhooks.
Maps, AI and delivery: MapLibre GL, ArcGIS, WebGL, Three.js, OpenRouter, LangChain, LangSmith, Cloudflare/R2, GCP, Docker, GitHub Actions, Grafana, Prometheus, Loki, Jest, Cypress, Playwright, React Testing Library, axe-core.

WORK EXPERIENCE

ScanSan Properties Jun 2025 – Present

Senior Frontend Engineer – London, UK

Skills: React, Next.js, TypeScript, TanStack Query/Table, MapLibre GL, PostGIS, WebGL, Three.js

- Built subscription-gated property intelligence across valuations, planning, investment analysis, reporting and tokenisation. Shipped **Atlas 2D/3D maps** with spatial overlays, clustering, reverse geocoding and point-in-polygon queries.
- Implemented React/Next.js workflows for **property tokenisation**, including utility-token declarations, asset-review gates and **wallet-signed deployment** designed around FCA cryptoasset perimeter guidance.
- Published the Chrome and Firefox **Property Assistant**, bringing planning and property context into Rightmove and Zoopla listings.
- Consolidated **20+** legacy tables into reusable TanStack DataTable and analytics patterns. Built property-advisor and underwriting journeys with weighted scoring, stress tests and contextual data.
- Parallelised CI quality jobs, reducing deployment/check time from roughly 7–15 minutes to 1 minute 20 seconds–2 minutes and improving code-to-release time by **40–50%**. Added **runtime configuration** so approved public settings could change without rebuilding the image.
- Built crawlable public listing/area pages, dynamic sitemaps, canonical URLs and structured data. Google Analytics recorded growth from **50 to 1,300 viewers** during the tracked period.
- Assisted data engineering on planning applications, noise, radon and house-price datasets, with address matching and council polygon acquisition; **fixed a Next.js vulnerability** and added preventative dependency-age and CI install-script controls.

RentSpace Technologies Limited Nov 2023 – May 2025

Software Development Lead – Remote, Nigeria

Skills: Flutter, React, Next.js, TypeScript, Node.js, GCP, Storybook, Paystack, Flutterwave

- Built mobile and web flows for onboarding, savings, lending, KYC, payments and financial dashboards; **led code review, mentoring and delivery**, establishing engineering standards across a multidisciplinary team.
- Reworked payment flows blocked by OTP and polling with **idempotent handling and webhook confirmation**. A company dashboard recorded **30% better checkout success** after the changes.
- Automated KYC checks and routed exceptions to human review; integrated credit scoring and document verification. The dashboard recorded **35% less KYC drop-off** and approval time shorter by up to two days.
- Built a **Storybook component library**, improved API integration and mobile release workflows with Shorebird, and built the **GCP deployment system**. The company reported **45% faster feature builds**.
- Interviewed and onboarded two backend, three frontend and two design colleagues; supported roughly **7–8 people**. Advised partner engineers on API concurrency, sessions and JWT design; joined the on-call rota.

Dowell Research UK Limited Aug 2023 – Sep 2024

Software Developer – Remote, UK (contract)

Skills: React, TypeScript, Python/Django assistance, Stripe, PayPal, Jest, Cypress, React Testing Library

- Built **multi-user UX-research workflows** across session identity, navigation and payments, including responsive interfaces and international subscription states. Integrated **Stripe and PayPal**, and supported Django services where frontend workflows depended on them.
- Authored **31 public pull requests** to Dowell Scale Function, covering session-ID routing, mixed-content fixes, product functionality and integration reliability.

Vanguard Media Limited (Vanguard News) Dec 2022 – Aug 2023

Full Stack Engineer – Nigeria

Skills: React, React Native, TypeScript, Node.js, WordPress/PHP; Flutter contributions

- Delivered reader-facing web and mobile features for Vanguard News, a platform with **5 million+ monthly active users**. Replaced unreliable direct `wp-json` use with a deployed backend and fixed high-cost endpoints; the company dashboard recorded **35% lower API load**.
- Worked with editorial and media teams on advertiser-facing placements, repaired mobile analytics and ad tracking, and improved Largest Contentful Paint, image delivery and SEO. Contributed to Flutter alongside React Native; the dashboard recorded **120% higher mobile ad revenue** during this work.

Fudap Co Nov 2022 – Apr 2023

Frontend Mobile Developer – Remote (contract)

Skills: React Native, Redux, maps, delivery APIs, payment handoff

- Built **food-delivery ordering and delivery-request flows**, including pickup/destination selection, map markers and sender/recipient details, using Redux coordinate state, API-returned fees and request IDs, and payment-link handoff.
- Moved nonessential startup fetches to background/on-demand work and cached default user data; the company dashboard recorded **60% faster startup**. Built GPS tracking, in-app payment handoff, push notifications and loyalty flows; the dashboard recorded **25% more repeat orders** during the period.

PROJECTS

Onjeki | Co-Founder and Chief Technology Officer (CTO) iOS | Android | Site

- Founded and shipped a **Flutter and Node.js property marketplace** where hosts list homes and customers book short stays or explore rental and sale options. Owned onboarding, discovery, availability, checkout, payouts, reviews and subscriptions; **led two developers**.
- Built Riverpod/GetX app flows, deep links, offline caching, Google/Apple sign-in and Socket.IO messaging. **Recovered interrupted bookings and payments**; used Redis/BullMQ jobs and PostgreSQL-backed services.
- Deployed on Hetzner with Docker, Caddy and **blue-green switching while protecting live Socket.IO sessions**; added Grafana, Prometheus and Loki observability. Built **AI workflows with OpenRouter, LangChain and LangSmith**, using context chaining.

Croft Group | Farm Management Platform croftgroup.farm

- Built **farm-management workflows** spanning flock, inventory, health, production, sales and reporting, with Flutter mobile, React web and Express/PostgreSQL services.
- Designed reporting and planned forecasting and anomaly-detection workflows around farm production and stock data.

DelacoTech Limited | Founder and Chief Executive Officer (CEO) delaco.net

- Founded the technology business and **led client software delivery**, product scoping, architecture, code review, releases and handover; **managed three developers** while remaining hands-on.
- Delivered client web and mobile products across property, commerce and services, with **direct ownership of implementation and deployment decisions**.

Meh Tracker | Open-Source Job Platform github.com/git-meh/meh-tracker

- Built job-search workflows with Next.js, **Supabase PostgreSQL/Auth/Storage/Realtime**, Drizzle and a **Supabase Edge Function** that checks listing availability.
- Contributed responsive product work, OpenRouter integration and PDF compatibility fixes in a public repository.

ReqParser | Open-Source Developer Tool GitHub

Built a **TypeScript CLI** that turns copied fetch and cURL requests into reusable axios, fetch, cURL or JSON output, with validation and sensitive-header redaction.

RivalRing | Open-Source Team Lead

Led frontend and mobile contributors across a **36-person** community, guiding RFCs, reviews and mentoring.

Nowon Security | Client Platform Site

Built a security-firm web product and supported its **Django/SQL backend integration**.

AwaAgent | Property Marketplace Site
Built rental flows around verified inspections, controlled address disclosure and **direct Cloudflare R2 uploads** for listing and identity media.

SwiftVista | Utility Payments Site
Built Flutter payment journeys for airtime, data, bills and subscriptions, with tailored receipts and page transitions.

Dammy's Kitchen | Food Ordering Site
Delivered customer ordering and delivery flows with real-time order updates for a live food-service product.

SafetyBox Redesign | Accessible Interface Site
Built responsive interfaces from design work; used **Storybook and axe-core** to review components and accessibility behaviour.

DBlackRose | Commerce and Media Site
Built a photography-equipment storefront with a media gallery and role-based catalogue and content administration.

PalmeFoods | Digital Storefront Site
Delivered customer ordering alongside staff inventory and fulfilment workflows connecting the storefront to daily operations.

Eonace | Banking Product Site
Worked on multi-currency spending, transfers, virtual cards and bill-payment journeys in a digital banking product.

Oke Jacobs | Photography Portfolio Site
Built a responsive photography portfolio presenting galleries, services and client enquiries.

CESPORA | Construction Portfolio Site
Built a construction company site presenting civil engineering services, completed work and enquiry paths.

OPEN SOURCE CONTRIBUTIONS

Zummit Africa, Zapi-FE: 32 authored pull requests, 24 merged, across API tooling, dashboards, notifications, authentication and responsive marketplace work; these contributions followed the earlier Zummit employment.

Independent upstream work: 13 merged pull requests across 12 repositories, including product code, regression tests, accessibility and documentation.

Remotion (65k+ repository stars): Merged Studio fix for folder labels and typeahead in the New Composition dialog.

FCaptcha: Merged runnable Next.js App Router form and token-verification example, with **replay and wrong-host regression tests**.

sysknife: Merged setup fix **preserving hand-edited approval guards** on reruns, with a regression test that failed before the change.

freeCodeCamp (457k+ repository stars): Two merged curriculum fixes covering JavaScript ledger serialization helpers and Python workshop recall.

OpsiMate: Merged shared action-matcher type fix that accepts existing action-name criteria without changing runtime behaviour.

DevImpact: Merged accessible labels for icon-only comparison controls using the product's existing translations.

Tabularis: Merged database-explorer feature to copy plain, quoted and schema-qualified table or view names.

django CMS: Merged admin-style fix keeping autocomplete search fields inline in multiple-select forms.

Sidequest: Merged configurable dashboard polling, including a setting to disable automatic refresh.

HeyGen Hyperframes: Merged audio-mixing fix that pads the combined output once instead of every clip.

Open Glassbeetle: Merged documentation index linking eight guides, including the semantic-memory proposal.

Avenx: Merged dynamic-components guide with a tested switcher example and current rendering limitations.

EDUCATION

Middlesex University, London 2025
BSc (Hons) IT & Business Information Systems, First-Class Honours.

Aptech 2020 – 2022
Advanced Diploma in Software Engineering (ADSE).
